

## Install Bow Stop Kit, Part # 21941 & 21956 & Roller Maintenance

Assemble most of the Wave Port and hinges while on land, including attaching any accessories (see **Attach Post Attachments to Wave Port Instructions**). If the posts are already anchored into the lake then you may slide the post attachments over the posts and then connect to the port while on the water.

### Bow Stop

1. Attach the bow stop to the front end of the Wave Port with 4 bolts and washers and tighten into the threaded inserts in the Wave Port decking.

2. Attach the D-Ring to the top of the Bow Stop using the  $\frac{1}{4}$  x  $\frac{1}{2}$ " bolts and tightening securely.

## Roller maintenance on Ports

**1. If it is difficult to launch or park the watercraft on the Wave Port the rollers should be lubricated with a light oil, silicone spray or silicone and Teflon spray. A food grade lubricant would be preferred but is not necessary. A spray on, non-stick cooking oil, such as Pam, may be used as well. Reapply as needed to keep the rollers operating smoothly.**
