#15837 Door Chain Spring Kit

09-04-12

Triton would like to announce a new accessory available for installation on any Triton enclosed trailer that is equipped with a side access door option. The **#15837 Door Chain Spring Kit** can be added to any existing or new Triton side access door.

The Door Chain Spring Kit is easy to install in the field. The mounting block attaches to top of the framework above the side access door and the chain block mounts to the top of the frame of the side access door itself (shown right).

This kit is great for anyone who wants their door open for a short amount

of time and does not want to open it fully and latch it on the door hold back. The Door Chain Spring Kit will prevent the door from hitting the side of your trailer and damaging the skin (shown right).

If you would like to open the door fully, all you have to do is unhook the "S" hook on the chain from the mounting block (top of the framework above the door, shown left).

The #15837 Door Chain Spring Kit is available to order with an enclosed order or as a spare part for field install. Thank you.

Sincerely,

Triton Sales Staff
