

Water Depth Sensor

Transmits an audible alert when your boat trailer hits the perfect depth.

Patents pending

Launch Alert is comprised of two parts: a water depth sensor and an alarm. The sensor mounts to the frame of the boat trailer wherever that "perfect" waterline point is determined; while the alarm plugs into the 12-volt power outlet of the tow vehicle. When backing up the boat, the instant the sensor hits the ideal depth, it sends a wireless signal to the receiver that alerts the driver to stop with an audible "beep"

Launch Alert speeds up the launch / load process at busy public accesses and also enhances safety when at the ramp. The compact, wireless system comes with battery.

- The sensor mounts easily and securely with pre-applied adhesive tape.
- Alarm unit plugs into cigarette lighter / 12-volt plug-in.
- Compact and wireless; battery included.
- Package size : 5-7/8" (W) x 9-3/8" (L)
